Re Stuart Clark:-

Project:- Replacing the old stables

Having moved into an old property in Warlingham in Surrey, the stable yard at the property, had a bank of 14 stables all of which were in various stages of disrepair as you can see from the photos.

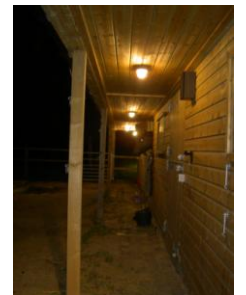

We wanted to replace the old stable block with new, purpose built stables, where we as a customer could have a say in how they looked, the size and the finish. Having just moved into the new house, as you can imagine we have limited finances so it was important that the price agreed was the price we paid without all those hidden extras.

We were recommended Mr Clark by a timber merchant that we use, and arranged for him to meet us to discuss plans, ideas and time frames. We met with three other companies, none of which "felt" right, so we awarded the work to Stuart, and have never regretted the decision from that moment on.

During the building process he was extremely efficient, with his suppliers delivering to him on time. 100% of his working time was spent on site no matter what the weather, until the job was finished. Throughout the build he involved all of us along the way, including encouraging our children to help out where and when they wanted, holding a bit of wood, or try and bang a nail in, which ensured they all felt very much apart of the process.

From start to finish, Stuart was punctual, professional, and most of all trustworthy. We will be embarking on another build project over the coming years, and Stuart will be our first and only port of call. I can not recommend him enough. As I have said to Stuart many times, I would be more than happy for future customers to contact me or arrange to come a see our fantastic stables and work shop.

Regards

Ian Kenning
